Summary / Zusammenfassung
The project consists of the data collection, data control and data analysis of psychiatric treatments in the area of the canton of Zurich. This is a catchment area of about 1.2 million inhabitants. In this basic statistics all inpatient and outpatient treatments in psychiatric institutions as well as all acute medical inpatient treatments of drug addicts and alcoholics in the mentioned catchment area are included. Data analysis is done for the individual institutions and for the cantonal government as part of monitoring and planning of the mental health care system. Data analysis is also done for scientific purposes. Furthermore the data are recoded, reduced and sent to the national bureau of statistics.

Statistics of psychiatric patients (PSYREC)
